PROFESSIONAL SUMMARY

Software Engineer and Application Systems Support professional with half a decade supporting financial management systems, payment platforms, and digital banking applications. Extensive hands-on User Acceptance Testing (UAT) experience across USSD, mobile money, and payment systems, including structured UAT cycles run on every system release. Direct operational exposure to Mobile Money through payment-integrated platforms including Smart Hub, SMS Gateway, and PBS Payment Gateway. Proven expertise in incident management, root cause analysis, and maintaining high uptime for mission-critical systems. Skilled in API integration, system monitoring, and cross-functional collaboration, with experience mentoring and guiding junior developers. As a freelancer, I also develop web systems and websites for clients across various industries.

CORE COMPETENCIES

Technical Support: Digital Banking Platforms • Mobile Money Payment Integrations • Incident & Problem Management • Root Cause Analysis • Performance Monitoring • Second & Third-Level Support

Technical Skills: API Integration REST • Payment Systems • Database Management • UAT & Stress Testing • USSD Systems & UAT

Software Engineering: Full-Stack Development • Elixir & Phoenix LiveView • PostgreSQL • MS SQL Server • MySQL • Financial Systems • Loan Management Systems • Multi-Tenant Architecture • Background Jobs

Change Management: Software Upgrades • Security Patches • Release Management • Rollback Strategies

WORK EXPERIENCE

Probase Limited — Application System Support Expert *Jan 2025 – Present | Lusaka, Zambia*

- Provide technical support for 50+ clients on financial platforms, achieving high issue resolution before escalation; systems supported include the Smart Hub system (payment-processing dependent), PBS SMS Gateway, PBS Payment Gateway, Lesotho Revenue Authority System, PBS SmartPay System, and PBS Smartcom System
- Support Mobile Money integrations directly through the Smart Hub, SMS Gateway, and PBS Payment Gateway systems, where Mobile Money is a core payment channel, giving hands-on operational understanding of how Mobile Money transactions flow, fail, and recover
- Run structured User Acceptance Testing on every system release, including USSD-based systems and the MFZ system, coordinating test planning, defect logging, and go-live readiness sign-off
- Investigate transaction failures and payment disruptions; perform root cause analysis to prevent recurrence
- Monitor system performance and conduct stress testing to validate performance under high transaction volumes
- Lead client training and participate in change control processes ensuring smooth deployments

Probase Limited — Software Engineer *Jan 2021 – Present | Lusaka, Zambia*

- Built and maintained 5+ financial management systems serving 1,000+ users with high availability, including systems for CEEC, Pangaea, Bridgewater Loans, and Falcon Express
- Led testing initiatives improving system reliability and reducing critical incidents significantly
- Implemented UAT protocols and coordinated software upgrades with minimal client disruption
- Mentored and guided junior developers on delivery standards and testing practices, improving team productivity and building early leadership experience

Freelance Software Engineer *2025 – Present | Lusaka, Zambia*

- Build and deploy websites for companies with no digital presence, helping them establish their brand online
- Handle end-to-end delivery including domain acquisition, hosting setup, system configuration, and post-production support
- Provide ongoing system support after go-live, ensuring client websites remain functional and up to date
- Assist companies with SEO to improve their online visibility and ranking on search engines

LetsDoGood Zambia — Software Developer *Jan 2020 – Dec 2020 | Lusaka, Zambia*

- Developed a social community platform enabling people to donate and share items with others, supporting 500+ users with real-time engagement features
- Conducted database modelling, schema design, and query optimisation for scalable data handling
- Participated in development testing and UAT stages, ensuring quality and reliability before go-live

Ideate Innovations Zambia — Software Engineer *Jan 2020 – Dec 2020 | Lusaka, Zambia*

- Built websites and web applications for clinics and SME companies, delivering professional digital solutions tailored to each client
- Collaborated with clients to gather requirements, design UI, and deploy production-ready web solutions

KEY ACHIEVEMENTS

- High first-contact resolution rate minimizing escalations
- High uptime across multiple financial management systems, including Mobile Money-integrated payment platforms
- Implemented stress testing protocols identifying bottlenecks before production
- Coordinated USSD and mobile money UAT cycles, including the MFZ system, ensuring release readiness before go-live
- Mentored developers, contributing to significant improvement in delivery timelines and early leadership experience
- Built loan management applications currently in active use by multiple companies, handling end-to-end loan origination, processing, and repayment tracking
- Designed and delivered multi-tenanted systems serving multiple clients on a single platform, ensuring data isolation, scalability, and tailored experiences per client
